

Executive Summary

ABP Food Group is launching a new meat free chicken alternative product for restaurants and has engaged Carbon Analytics to produce a Life Cycle Assessment of the product. To facilitate this analysis data was collected from ABP Food Group and its suppliers relating to the product, contributing ingredients, packaging, manufacturing, logistics and extended supply chain. This data was processed and utilized to produce a set of calculations for the Cradle to Gate Life Cycle Footprint of the new product according to the PAS 2050 standard for Product Carbon Footprinting.

The results of the analysis are as follows:

	Total
kg co2e / kg	2.256937
kg co2e / unit	0.16927

The attached report details the methodologies, data sources, assumptions and limitations of these results.
